

AvailabilityGuard HealthCheck (HC) as a service

1. Licensing
 - a. The ordered license should cover all of the servers in the scanned environment
 - b. A “Server” means:
 - i. For non-Unix systems: A single, physical computer with up to 4 CPU-sockets on the Customer’s network that is scanned directly or indirectly by AvailabilityGuard
 - ii. For Unix systems: A single Logical Partition on the Customer’s network that is scanned directly or indirectly by AvailabilityGuard

They are:

 - Solaris Zones/containers/LDOMs
 - HPUX nPar/vPar
 - AIX VIO (PowerVM)
 - AIX LPARs
2. Continuity Software can generate reports based on the collected data and predefined HC templates. Please note that report generation does not include installation and configuration of AvailabilityGuard.

3. Pricing

SKU #	Item	Price
